Capturing CO₂ from air

In order to limit global warming to 1.5°C, mankind needs to go carbon neutral by 2050. This not only involves reducing carbon emissions, but also developing technologies, which enable the active removal of CO₂ from the atmosphere on a large scale.

Climeworks is a spin-off company from ETH in Zurich that has developed a process to capture CO₂ directly from air. The air-captured CO₂ can be used in the merchant market to carbonate drinks or to fertilize greenhouses. It can also be synthesized to renewable fuels and materials, providing a carbon neutral alternative to fossil fuels. Climeworks also has an installation in Iceland, which captures CO₂ from the air and turns it into stone, thus actively reducing the CO₂ concentration in the atmosphere.

In cooperation with

Speaker

Dominique Kronenberg, COO

Dominique holds an MSc in mechanical engineering from ETH Zürich and as Climeworks' first employee, has been responsible for ensuring Climeworks' operations for the last seven years. Prior to Climeworks, Dominique was President and CEO of ETH Juniors – a junior enterprise ranked among the top three of 200 junior enterprises in Europe.

Venue

Hochschule Luzern – Wirtschaft
Institut für Finanzdienstleistungen Zug IFZ
Grafenauweg 10, 6302 Zug

Date/Time

Wednesday, 15 May 2019
18.15 – 19.45 Evening Event
19.45 Apéro

Admission

Free of charge

Registration

Please register on our website or send us an e-mail to info@zugcommodity.ch until 10 May 2019.
